feedback.md 2024-03-26

# Feedback | Group 3

#### Milestone 1

#### Problem Definition | 20 points

The problem is defined properly, and the structure was kept

- Broad Area of Interest
- Preliminary Research
  - o Current trends
  - o Opportunities
- Solution with Methodology
  - o Data Collection
  - Analytical Techniques
  - o Implementation Plan
- Expected Outcomes
- Evaluation Metrics

Grade: 20

#### Roadmap | 10 points

The roadmap seems realistic.

Grade: 10

#### Administrative Tasks | 5 points

- Roles are assigned
- Preliminary discussion with me was done
- Slack channel is create
- Github Repo is created

Grade: 5

#### Technical Tasks | 5 points

- Proper <u>gitignore</u> file is available; however Python track wasn't selected
- The Requirments.txt file is available, indicating that venv was created
- The first chapter of the Package Development course is done by everyone

Grade: 4

#### Grade

Final Grade: 39/40

feedback.md 2024-03-26

# Milestone 2 | Tasks

### Prudoct and Project Manager | 40 points

- 1. Name your Python package: register to pypi
- 2. Install mkdocs package to start with the documentation
- 3. Database schema: Provide your product database structure (ERD)
- 4. Transform your project file structure according to the below tree

```
PythonPackageProject/ #githhub repo
  yourpackagename/
      - __init__.py
     — submodule1/ #database related
         — __init__.py
         — submodule1 1.py
    └─ submodule2/ #model related
         — __init__.py
        submodule1_2.py
     └─ submodule3/ # api related
          – init .py
        ___ submodule1_2.py
  - tests/
     — __init__.py
      - test_module1.py
    test_module2.py
  example.ipynb # showing how it works
|-- run.py # in order to run an API
|— docs/ #this folder we need for documentation
— .gitignore
 — requirments.txt
  README.md
  LICENSE
  – setup.py
```

### Data Scientist and Data Analyst | 20 points

- 1. Simulate the data if you need
- 2. Try to use the CRUD functionality done by DB Developer
- 3. Work on modeling part using simple models

```
from yourpackage.submodule2 import modelname
```

## Database Developer | 30 points

1. Create a DB and respective tables suggested by the Product Manager

feedback.md 2024-03-26

- 2. Connect to SQL with Python
- 3. Push data from flat files to DB
- 4. Test the code provided here and complete the missing components
- 5. Add extra methods that you might need throughout the project:
  - 1. Communicate with PM and API Developer for custom functionality

from yourpackage.submodule1 import sqlinteractions

### API Developer | 30 points

- 1. Communicate with DB Developer and PM in order to design the API
- 2. You can create dummy endpoints in the beginning, then communicate with PM as well
- 3. The following endpoints must be available:
  - 1. GET
  - 2. POST
  - 3. UPDATE

Check out this this repo.

from yourpackage.submodule2 import api
